

Foody

Work hard, skip hangry.

Lives inside **Slack**

GROUP FOOD ORDERING · WITHOUT LEAVING THE CHANNEL

Someone types "let's eat something" — Foody takes the whole team from hungry to ordered.

No app to download, no link to chase, no "what does everyone want?" thread. Foody picks up right where your team already works, walks the channel through choosing a restaurant, and builds one shared basket from everyone's emoji reactions. One tap and you're at checkout on takeaway.com.

1

Sticky address

Asked once, remembered forever. Change it anytime with a message.

2

Top 3 nearby

The best-rated spots near you, as one-tap cards.

3

Top 10 dishes

Pre-reacted so the team adds with a single click.

4

Shared basket

React to add, un-react to remove. Live running total.

5

One-tap order

Hit the green button — the basket builds itself on takeaway.com.

Why teams love it

Zero friction, zero new tools

It's a conversation. Everyone already knows how to react with an emoji — that's the entire interface.

Genuinely collaborative

The basket is shared and live. Anyone adds, anyone removes, everyone sees the total update instantly.

Real checkout, not a mock

Foody drives a live takeaway.com basket in your browser — your saved address and payment, ready to confirm.

Self-healing

Drop your connection mid-order? The basket reconciles from the reactions on the message — nothing gets lost.

REACT TO ADD · THE TEAM'S ONE-TAP MENU

What makes it different

- ✓ **Slack-native by design.** Built on Block Kit — the cards, buttons and reactions are first-class, not a webview bolted on.
- ✓ **Deterministic, not a chatbot.** No LLM in the runtime path. Predictable, fast, and it does exactly the same thing every time.
- ✓ **Decisions in seconds.** Top-3 and top-10 are curated for you — no scrolling endless menus to reach consensus.
- ✓ **Private to your workspace.** Runs over Socket Mode — no public URL, no data leaving your team.

Get your team fed in under a minute.

Invite @Foody to a channel, type "let's eat something", and watch the basket fill itself.
